# con-pearl® click fix

*innovative systems with intermediate layers for fragile goods*

con-pearl® click fix can be inserted in all con-pearl® sleeves

multiple levels are optional and can be adapted to the goods to be transported

divides our pallet boxes into several levels

maximum volume reduction when empty packaging is returned

## no moving parts!

All parts are firmly attached to the pallet box or the intermediate layer. The exchange of individual components can be done easily.

## intermediate layers with grip holes

consist of a stable con-pearl® lightweight boards. The layers can be adapted in regard to the requirement of the load capacity. A load capacity up to 100kg per layer is possible.

The grip holes enables an ergonomic inserting and removing of intermediate layers. Layers can be inserted without any tools.

**100 kg**  
**load capacity**

**locking hook and adapter for locking hook**  
Intermediate layers can be hooked easily.

**load door**  
The load door simplifies the loading/unloading of the pallet box and the inserting/removing of intermediate layers.
